DETAILED ACTION

Response to Amendment

In response to the Office Action mailed August 14, 2001, applicant has submitted Amendment A, paper #7, to which claims 1, 3, 4, 7, 8, and 10 have been amended and added new claims 11-17.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Frederick (US Patent No. 5,768,126) in view of Kondo (US Patent No. 5,952,596).

3. Regarding claims 1-17, Frederick teaches an audio mixer for mixing multiple audio data streams. Frederick teaches

receiving a first audio data stream at the Abstract and col. 5, lines 57-60

receiving a second audio data stream at the Abstract and col. 5, lines 57-60

mixing samples of the two data streams at col. 19, lines 61-67 continuing to col.

20, lines 1-9.

Frederick does not specifically teach cross fading the samples as a mixing implementation. Refer to Kondo who teach a method of audio signal processing which modifies the tempo and or pitch scale of an audio signal via a cross-fading method.

Kondo teaches an implementation of mixing signals which re-samples or normalizes samples based on a desired sampling rate, in which the signals overlap by an offset amount $T'/2$, applies a cross-fading coefficient to the signals to achieve the cross-fading of the signals (col. 5, line 14 continuing to col. 7, line 18).

Kondo implements the weighted cross fading method to achieve smoothing of the junction of the mixed signals so as to remove discontinuities of the waveform that occurs due to mixing.

Therefore, it would have been obvious to one of ordinary skill at the time of invention to modify the audio mixer of Frederick to implement a weighted cross-fading algorithm or mechanism as taught by Kondo, for the purpose of reducing discontinuities during the mixing of data streams, as suggested by Kondo.

Response to Arguments

4. Applicant's arguments with respect to claims 1-17 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within

Art Unit: 2654

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
